EDUCATION

University of California, San Diego

Bachelor of Science in Data Science, Minor in Finance | **GPA: 3.96**

San Diego, CA

Sep 2023 – Jun 2027

EXPERIENCE

Pricewaterhouse Coopers LLP (PwC)

Technology Consultant Intern, AI Engineering

Gurugram, India

Jun 2025 – Sep 2025

- Cut cloud provisioning time by 60% by designing and deploying an enterprise-grade multi-agent AI system that automates AWS and Azure onboarding for enterprise clients.
- Reduced configuration errors by 45% by engineering LLM-powered intent detection and dynamic workflow routing across 15+ cloud services.
- Architected secure, modular agent workflows for credential management, IAM provisioning, and infrastructure configuration, shipped to production across live PwC client engagements. **Tech:** LangGraph, LangChain, Gemini 2.5 Pro, MCP, AWS, Azure.

CSES Open Source, UC San Diego

President and Engineering Manager

San Diego, CA

Nov 2024 – Present

- Direct a 100-member engineering organization, launching 3 new open-source projects and forging strategic industry and faculty partnerships with the Linux Foundation, Cisco, and NVIDIA.
- As Engineering Manager of TritonSpend, led development of an AI-powered financial assistant for 100+ active UCSD students, architecting the backend AI layer and real-time data pipelines behind its personalized spending insights and goal recommendations. **Tech:** Node.js, PostgreSQL, LLM APIs, Recommendation Systems.

Engineers for Exploration, UC San Diego

Undergraduate Researcher and Project Lead

San Diego, CA

Oct 2025 – Apr 2026

- Improved mangrove-classification accuracy by 25% over baseline by building and deploying a production ML pipeline that fuses drone and Sentinel-2 multispectral imagery across 10+ GB of geospatial data.
- Delivered the system to the Scripps Institution of Oceanography for active use in real-world coastal conservation monitoring. **Tech:** Python, TensorFlow, Google Earth Engine.

Indian Institute of Technology Guwahati

Machine Learning Research Intern

Guwahati, India

Jun 2024 – Sep 2024

- Achieved 80% accuracy on SAR satellite image classification across 4 land-cover categories by engineering a ResNet50-based CNN with iterative architecture tuning and data augmentation.
- Applied Lee and Gamma-MAP speckle filters to denoise SAR imagery, validating robustness with precision, recall, F1-score, and confusion-matrix analysis. **Tech:** Python, PyTorch, ResNet50, OpenCV.

PROJECTS

Math Reasoning (Qwen3-4B) | GRPO, LLM Fine-Tuning, LLM Evaluation | [GitHub](#)

May 2026 – Jun 2026

- Fine-tuned Qwen3-4B for competition mathematics using GRPO (group relative policy optimization), lifting public-leaderboard accuracy to 0.720.
- Layered inference-time optimization and a judge-aligned LLM evaluation harness onto the fine-tuned model, documenting the full pipeline and results in a NeurIPS-format report.

TumorSense | PyTorch, Scikit-learn, Hugging Face, FastAPI | [GitHub](#)

Apr 2026 – Jun 2026

- Built a breast-tumor diagnostic pipeline on the Wisconsin dataset with recursive feature elimination and grid-searched SVM kernels, reaching 98% malignant recall and 0.995 ROC-AUC while minimizing life-critical false negatives.
- Extended it with PyTorch CNN and ViT histopathology classifiers and SHAP- and RAG-based explainability, deployed as a FastAPI service with Hugging Face-hosted weights; awarded **Best Project, DS3 Spring 2026**.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Java, R

AI and ML: TensorFlow, PyTorch, Keras, Scikit-learn, Hugging Face, OpenCV, FAISS, RAG, Reinforcement Learning

GenAI and Agents: LangChain, LangGraph, Gemini, MCP, Prompt Engineering, LLM Fine-Tuning (GRPO), LLM Evaluation, Multi-Agent Systems

MLOps and Cloud: Streamlit, FastAPI, Docker, Kubernetes, CI/CD, Git/GitHub, AWS, Azure, GCP, PostgreSQL, Node.js, Supabase, Pandas, NumPy, Apache Spark

AI Dev Tools: Claude Code, Codex, Cursor
